SUMMARY

Stay Informed | Manage Distress | Practice Resilience

OBTAIN Up-to-Date Information

- Consult reliable and reputable sources of information
- When in doubt, consult your physician or local health department

MANAGE Distress

- Stress during a pandemic is expected and normal; however, when excessive it can affect your functioning
- Behavioral activation, mindfulness, and seeking help for distress from mental health professionals, when needed, can help.

IMPROVE Resilience

- Maintain optimism
- Learn from resilient role models
- Get support from your friends and family
- Be flexible
- Problem solve
- Accept the situation for what it is. Face your fears.
- Help others
- Exercise
- Use your faith, life, or moral compass as a support
- Keep your sense of humor!
During the rapidly changing COVID-19 pandemic, it is critically important to be aware of recent developments such as grocery store hours, public transportation changes, area closings, shelter-in-place orders, etc. in your local community.

**Word of Mouth**
Trust but verify. Please do not share information until you have verified it. Rumors can have a significantly negative effect on the health of a community.

**Social Media**
People are spending more time than ever on social media sites like Twitter, Facebook, Instagram, and several others. These sites increasingly serve as sources of valuable information. However, it is important to verify the COVID-19 related information found on social media.

**CDC, County & State Health Departments**
These websites are being updated regularly. Information is prepared by professionals and based on best available knowledge and resources. In this pandemic that’s affecting different parts of the country differently, County and State health departments are an excellent resource.

**Print & Online Media**
Newspapers are extensively covering the pandemic and have up-to-date information. Online editions are updated frequently.
Behavioral Activation and Self-Management is an effective approach. It has three components.

**DISTRESS MANAGEMENT**

- Cardio (walking or running on a treadmill, using indoor rowing and elliptical machines, swimming, high-intensity interval training, etc.) at least three times a week
- Strength training at least once a week

- Staying home can result in social isolation especially for the elderly population. Use FaceTime or other similar services, video conferences, or group chats to socialize.
- Local gyms and some exercise instructors have live workout sessions.
- Play online video games with friends or make new friends!

- It is important to continue to participate in pleasurable activities/hobbies.

**PHYSICAL ACTIVITIES**

**SOCIAL CONNECTEDNESS**

**PLEASUREABLE ACTIVITIES**
DISTRESS MANAGEMENT

Mindfulness-based strategies can be quite helpful. Developing skill for intentional and trained attention is a critical first step. You can get better at this non-critical and compassionate type of attention with practice.

Joyful Attention:
1. Set aside 4–8 time blocks of 10–20 minutes to train attention.
2. Pay attention to your surroundings while walking and eat while focusing on smell, taste, and texture of food.
3. Spend 10–20 minutes with nature and pay attention to your surroundings.
4. Greet your family and friends as if you are meeting them after a long absence.
5. Say one good thing about people you meet.
6. Practice deep breathing.

Kind Attention:
1. When you see others, be compassionate, accept them for who they are, delay judgment, and try to ignore minor inconveniences they may have caused you.

Adopted from: Amit Sood, MD, MSc. Mayo Clinic Guide To Stress-Free Living
DISTRESS MANAGEMENT

Health, diet, and restful sleep can significantly reduce stress.

Eat small and healthy meals and snacks spaced throughout the day.

Practice good sleep hygiene.

Avoid or limit use of alcohol and caffeine. If you have dietary restrictions, stock specialty food items (eg, low-salt, sugar-free, or gluten-free items) as they may not be easily available.

Sleep at consistent times in a quiet and dark room maintained at a comfortable temperature. Remove TVs and smart devices from your bedroom. Be physically active during the day and avoid meals, caffeine, and alcohol before bedtime.

Resilience is the ability to bounce back after a challenging time.

1. **Optimism**
   - Realistic optimism is the belief in a bright future and that things will get better.

2. **Fear**
   - Fear is an adaptive response. Recognize it, face it, and don’t overreact or avoid difficult decisions based on fear.

3. **Moral Compass**
   - Do the right things guided by your own principles, consistently.

4. **Faith**
   - Rely on religion, spirituality, or moral code.

5. **Social Support**
   - Be there for others – elderly or disabled persons and those living alone need special consideration.

Adapted from Southwick & Charney: Resilience-The Science of Mastering Life's Greatest Challenges
Resilience is the ability to bounce back after a challenging time.

**IMPROVE RESILIENCE**

1. **Resilience**
   - Resilience is the ability to bounce back after a challenging time.
   - Adopted from Southwick & Charney: Resilience-The Science of Mastering Life’s Greatest Challenges

2. **Learn what to do and what not to do from your role models.**
   - Role Model
   - Regularly engage in mentally challenging activities.
   - Brain Fitness

3. **Having a sense of purpose in life is important. Find yours as this gives meaning to life and leads to growth.**
   - The Why of Life

4. **Be mentally and emotional flexible.**
   - Life-Change

5. **Regularly exercise to promote physical fitness and strength.**
   - Training
